

## OVERVIEW

The ON-BRD-500 series is a low voltage OS-NET Sensor (ONS) packed with multi-scheme sensing and control functionalities including occupancy/vacancy sensing, daylight harvesting, bi-level StepDIM or continuous SmartDIM, and wireless mesh networking capability. Through some easy and safe low voltage DC wiring connection with IR-TEC power pack and 0-10V dimmable LED drivers, this sensor is capable of providing top-notch intelligent lighting controls required for industrial and commercial applications.

The sensor not only controls the connected light based on the programmed scheme through power pack switching and 0-10V dimming scheme independently, but also acts as a node of mesh network to broadcast the OS-NET command for group lighting activation wirelessly. All network setup, grouping and control settings; including control scheme, delay times, ambient light level threshold, ramp up/fade down speed, sensitivity, burn-in duration...etc. can be easily and intuitively configured via a 2-way handheld remote programmer from the floor.

Being a member of Omni ONS, the ON-BRD-500 can be flexibly mounted on the ceiling or integrated with an OEM luminaire in a variety of options. Changeable lens options allow the sensor to be mounted at various heights with different detection patterns for all applications. With ON-BRD-500, you can easily achieve energy efficient, code-compliant smart lighting control through a wireless sensor mesh network effortlessly deployed while installing the OS-NET enabled lighting.
