

OVERVIEW

The ON-LRD-509 series is an OS-NET Sensor (ONS) packed with multiple sensing control functionalities including occupancy/vacancy sensing, daylight harvesting, bi-level StepDIM or continuous SmartDIM, and wireless mesh networking capability for top-notch intelligent lighting control.

The sensor not only controls the connected lighting in the programmed mode independently when it detects the presence of an occupant/vehicle or change of ambient light level, but also acts as a network node to broadcast the OS-NET command for group lighting activation wirelessly. All network setup, sensor grouping and setting; including sensing control scheme, delay times, ambient light level threshold, ramp up/fade down speed, sensitivity, burn-in duration...etc. can be configured via a 2-way handheld remote programmer from the floor.

Being a member of Omni ONS, this sensor can be flexibly integrated with an OEM luminaire, or mounted on the ceiling in a variety of options. Changeable lens options allow the sensor to be mounted at various heights with different detection patterns for all applications. With ON-LRD-509, you can effortlessly achieve energy efficient, code-compliant smart lighting control through a wireless sensor mesh network effortlessly deployed while installing the OS-NET enabled lighting.
