

### OVERVIEW

The ON-LRD-209SP is a low profile OS-NET Sensor (ONS) packed with multiple control functionalities including occupancy/vacancy sensing, daylight harvesting, bi-level StepDIM or continuous SmartDIM, and wireless mesh networking capability for top-notch intelligent lighting control.

Being a member of Mini ONS, this passive infrared (PIR) sensor not only automatically controls the connected lighting as per scheme programmed by detecting the presence of occupant and the ambient light level, but also operates as a node of mesh network to broadcast the wireless command for group lighting control. All network setup, grouping and control settings; including sensing control scheme, delay time, ambient light level threshold, ramp up/fade down speed, sensitivity, burn-in duration...etc. can be easily and intuitively configured via a 2-way handheld remote programmer from the floor.

This batten mount sensor can be integrated with general luminaires through a 1/2" knockout hole. A low profile flat lens provides excellent occupancy sensing capability within its coverage of 2X mounting height. With ON-LRD-209SP, you can easily achieve code-compliant, energy efficient smart lighting control through a wireless sensor mesh network effortlessly deployed while installing the OS-NET enabled luminaires in commercial
